STUDENT'S NAME AMAN HIMATSINGHA

CLASS XII

AGE GROUP: (I) 12-19

(II) 19-30

(III) 30-45

(IV) 45-65

Are you aware of the huge amount of waste created by the modern human society in our day to day life?

Yes, initiatives taken by my school in addition to the plethora of information made available online has made me aware of our current situation.

Do you believe that the evils of climate change and global warming have direct link to this? Could you justify your answer.

Yes, most scientists and countries today agree that human activities including the generation of waste are the causal factor of climate change and global warming. The rate of change of the average world temperature, melting of the snow caps and extinction of a large number of species due to loss of habitat over the past 100 years is sufficient proof for the same.

How could you contribute in the management of this global environmental problem?

The best way to tackle a problem that threatens all of humanity, is to tackle it at the individual level. It is imperative to spread awareness to ensure everyone knows about the extent of the problem, and start making changes in their day to day lives to tackle said problem.

Has our school contributed in raising your awareness on this issue? If so, how? Name the awareness programme you have participated in.

Our school has done its part to raise awareness on the issue of climate change, this includes taking part in Vital Waste Day, an initiative that involved all the school students who did their part by collecting old newspapers. Our school also has the 'Global Gang' - an active environment protection club.
